

WHAT IS CLAIMED IS:

1. A cap for a container, comprising:
  - 5 a moulding, the moulding comprising a retaining portion for engaging the container and retaining the cap thereon, a frangibly removable portion which is removable to expose at least partly a closure member for the container, and a user engageable member operable by a user to remove the removable portion; and
  - a protective portion for the engageable member and provided radially
  - 10 outwardly thereof, the protective portion being formed separately of the moulding and being attached thereto.
2. The cap as claimed of Claim 1, wherein the protective portion is removably attached to the moulding.
- 15 3. The cap of Claim 1, wherein the protective portion comprises a wall which extends generally about the periphery of the engageable member, the wall having at least one opening therethrough.
- 20 4. The cap of Claim 3, wherein a said opening is sufficiently large to allow radial access by a user's finger to the engageable member.

5. The cap of Claim 4, wherein the opening allowing such radial access is located opposite to a portion of the moulding which connects the engageable member and the removable portion.

5 6. The cap of Claim 1, wherein the removable portion has an inclined surface to assist drainage thereof when the cap is in an upright position.

7. The cap of Claim 1, wherein the protective portion is in the form of a removable cover over the engageable member.

10

8. A package comprising a container with a mouth, a stopper removably inserted into said mouth, a cap overlying said stopper, wherein the cap comprises a moulding provided with a frangibly removable portion which is removable to expose at least partly the stopper and with a user engageable member operable by a user to remove  
15 the removable portion, and wherein the cap further comprises a protective portion for the engageable member and provided radially outwardly thereof, the protective portion being formed separately of the moulding and being attached thereto.

9. The cap of Claim 1, wherein said cap is provided with a tamper-evident  
20 member that is removably attached to the cap.

10. The cap of Claim 9, wherein said tamper-evident member is a ring which engages beneath a lip of the container.
